

BREAKING NEWS

Enbox upgrades and new features released soon

The Enbox team have been working on a range of upgrades and improvements to your Enbox experience and are pleased to announce these will be released on **10th February 2021**

A complete redesign of the site to **improve and simplify** the user interface

Dashboard **tile redesign** for noise, vibration and air quality with flip-able dashboard tiles that allow you to choose between a clear **graphical display or numerical levels**

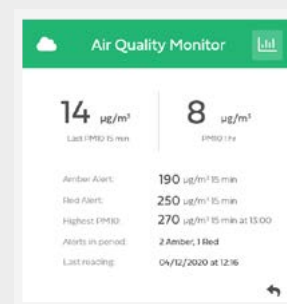

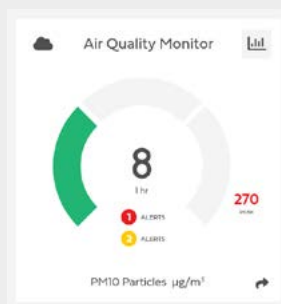

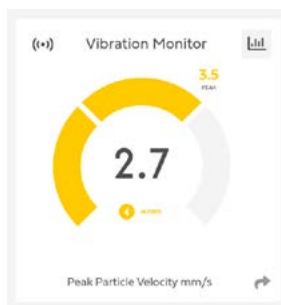

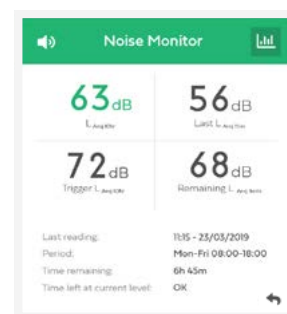

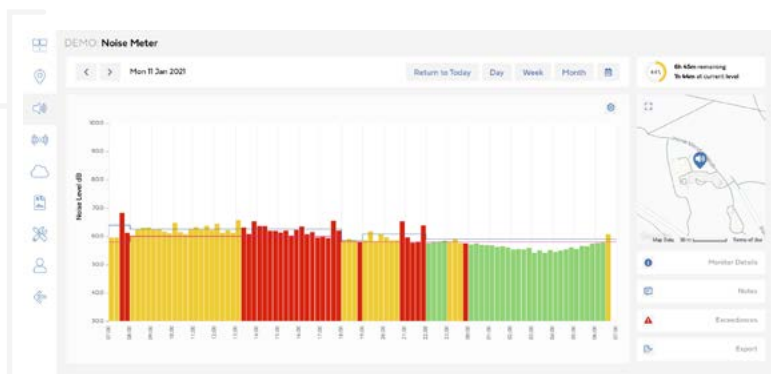

Option to **display Noise as a percentage** of the amount used to show more clearly how close you are to the limits and manage your works more efficiently

Upgrade to the graphing display to enable zooming, date selection and clearer crosshair information

List of monitors with key details for easier selection and overview

Octave/Third Octave frequency display for noise monitors (where this feature is supported and enabled on the noise monitor)

Improvements to the Section 61 database following user feedback

Not only have we redesigned the front end but significant development has gone on behind the scenes to improve scalability and performance and also enable future site developments.

These are just some of the features to be included in the new release and we are already working on a number of further exciting developments.
